Log Manager

Affordable and Automated Compliance Management

Log Manager is a comprehensive security and compliance management service designed to help you avoid the cost and effort associated with doing it on your own.

Save time and money when you take advantage of superior network security and compliance via our log-management services.

We host the solution infrastructure and manage the process so you don't have to.

We Make It Simple

To comply with today's government and industry mandates, and to enhance overall security, log data must be collected, regularly reviewed and archived.

Manually reviewing even a single system or firewall log on a regular basis is virtually impossible because it requires the complex and time-consuming task of analyzing hundreds, or even thousands, of distributed logs.

Most organizations simply do not have the resources for such an intensive review. Previously the hassle and cost of purchasing and managing a log-management infrastructure, including the necessary terabytes of storage, could be staggering. This was especially true for small and midsize organizations.

Log Manager enables management of log data in a revolutionary new way. This new log-management service is the only solution using on-demand architecture to automatically collect, transmit, analyze and archive log data on a business-wide scale.

How It Works

An in-network appliance collects, aggregates and compresses the data, which is then transported to a highly secure data center. Once there, the data is processed, analyzed, reviewed and stored for reporting, forensics and long-term archiving.

Key Benefit:

Intrusion Protection

- **Enables regulatory compliance** with automated log-data collection and due-diligence review as well as immutable, redundant and secure archival

- **Improves incident response and resolution** for security, performance and availability incidents via quick and easy browser-based access to all historical log data

- **Easy to buy, deploy, use and own** with no software or hardware to purchase or maintain, no upfront investment required, and everything included in one convenient monthly fee

Log Manager Services Include:

- Real-time data views
- Automated data collection and archiving
- Customizable reporting capability
- Fast, fully indexed archive search
- Customizable data-retention policy
- Fully redundant data archive
- Encrypted and compressed log-data transport
- Single centralized view and management of all log data
- Automated thresholding and alerting
