

OnLine Backup and Restore

On-demand Data Restoration

Lost files and computer downtime caused by user error and corrupted tape drives occur regularly and are the source of significant — but often hidden — business costs. In addition, restoring data from tape can take an inordinate amount of time and sometimes even fail, causing a direct business impact.

ProTech's Online Backup and Restore ensures that our customers' crucial data can be restored quickly, easily and on demand. If protecting and restoring your business information has been inconsistent and unreliable, select ProTech.

A Solution You Can Trust

Many companies trust the backup of their data to a fragmented and often ineffective policy of distributed tape devices, manual routines and off-site tape storage.

ProTech's Online Backup and Restore solution provides a unique, automatic, safe approach to data storage by offering:

- A fully automated process with backups saved on disk for rapid file restoration
- Secure online transfer of fully encrypted data to an off-site data center, ensuring regular backups are stored safely and remotely
- Automated alert if backup fails.

ProTech will come to your location, perform a full analysis of your existing backup plan and infrastructure, then design a custom backup solution that securely and efficiently backs up your company's IT infrastructure and vital electronic information.

Key Features

- **Centralized**, automated backup of PCs, file servers and application/database servers
- **Immediate recovery** process for quick online data restoration
- **Agentless Backup** software, for easy installations
- **Common file elimination** and compression to ensure bandwidth and storage requirements are minimized
- **Open file management** that enables backup of almost any file
- **Securely transmitted data** at encryption levels exceeding standard government and banking requirements
